Portfolio: portfolio-shakthi-rithanya.onrender.com

Executive Summary

- Pre-final year AI & ML student with strong hands-on experience building end-to-end AI systems across finance, healthcare, accessibility, and security domains. Skilled in Python, FastAPI, React, Machine Learning, and full-stack AI integration with exposure to deployment-focused workflows and scalable intelligent systems. Passionate about building production-grade AI solutions that solve real-world problems through automation, explainability, and impactful user experiences.

Technical Skills

- Programming Languages: Python, JavaScript, TypeScript
- AI / ML: Machine Learning, Explainable AI (XAI), SHAP, XGBoost, Scikit-learn
- Frameworks & Libraries: FastAPI, Flask, React 18, Next.js, Streamlit, Tailwind CSS
- Databases: SQLite, SQLAlchemy, SQLModel
- Tools & Platforms: GitHub, Vite, Uvicorn, Plotly, Gemini AI API

Professional Projects

Intelli-Credit | AI/ML Project Developer

- Developed an AI-driven credit scoring platform focused on transparent financial risk assessment using Explainable AI concepts. Built interactive What-If simulations, SHAP-based visual analytics, and automated credit appraisal workflows for intelligent banking decisions. Designed officer and borrower dashboards with modern responsive UI and role-based access systems.
- Main Technologies: React 18, FastAPI, SQLite, SHAP, Gradient Boosting

VazhiKaatti | Full Stack AI Developer

- Built an AI-powered financial assistance platform designed specifically for women farmers to improve rural financial accessibility. Integrated bilingual Tamil/English support, Tamil voice input, ML-based credit scoring, and personalized government scheme recommendations. Developed officer dashboards, document verification modules, and mobile-first user experiences.
- Main Technologies: React 18, FastAPI, Scikit-learn, SQLAlchemy

SecureHealth AI | AI Platform Developer

- Developed an AI-powered hospital security and monitoring platform capable of detecting insider threats through anomaly detection and intelligent behavioral analysis. Implemented real-time alert systems, role-based dashboards, secure authentication workflows, and privacy-safe natural language query capabilities for healthcare environments.
- Main Technologies: React 18, FastAPI, SQLite, WebSockets, Gemini AI

AI-Powered Financial Statement Analyzer | AI Product Developer

- Built a financial intelligence platform that transforms static PDF financial reports into AI-assisted investment insights through automated extraction and analytical workflows. Designed a multi-stage analysis pipeline capable of generating summaries, financial interpretations, and decision-support insights for faster investment analysis.
- Main Technologies: Python, Streamlit, Gemini AI, Pandas, Plotly

MATRINET | AI Healthcare Platform Developer

- Created an AI-powered maternal and child healthcare monitoring system for identifying high-risk healthcare cases and improving intervention workflows. Developed dashboards for hospitals, beneficiaries, and healthcare authorizers with predictive analytics, healthcare coverage tracking, and role-based healthcare management features.
- Main Technologies: FastAPI, React, SQLite, SQLAlchemy

Education

- Bachelor of Engineering (B.E) – Computer Science Engineering (AI & ML)
- KGISL Institute of Technology – 2028
- CGPA: 8.34

Awards & Accomplishments

- 3rd Prize – Math Expo 2025, KITE Department of Science & Humanities
- Successfully completed National-Level AI Internship – ADVERK EDUCATIONS
- Built multiple AI-powered full-stack applications across finance, healthcare, and security domains

Certifications

- Artificial Intelligence Primer Certification – TCS iON

Completed foundational training in Artificial Intelligence concepts, intelligent systems, and practical AI applications with exposure to modern AI workflows.

- Generative AI Unleashing – TCS iON

Learned core concepts of Generative AI including AI-driven content generation, LLM applications, and emerging AI capabilities for real-world problem solving.

- Generative Models for Developers – TCS iON

Gained practical understanding of generative models, AI development workflows, and implementation techniques for developer-focused AI applications.

- Artificial Intelligence Certification – TCS iON

Completed training covering AI fundamentals, machine learning concepts, and intelligent automation systems used in modern software solutions.

- Prompt Engineering – TCS iON

Learned advanced prompt engineering techniques for improving Large Language Model (LLM) responses, AI interaction quality, and workflow optimization.

- OpenAI GPT-3 for Developers – TCS iON

Explored OpenAI GPT-3 capabilities, API integration, prompt-based application development, and AI-powered automation workflows.

- Principles of Generative AI Certification – TCS iON

Studied foundational principles of Generative AI, model behavior, responsible AI usage, and AI-assisted content generation systems.

- Introduction to OpenAI GPT Models – TCS iON

Learned the fundamentals of OpenAI GPT models, natural language processing workflows, and practical LLM-based application development.

- Agile Scrum in Practice – TCS iON

Developed understanding of Agile methodologies, Scrum workflows, sprint planning, collaboration models, and iterative software development practices.

- Deep Learning for Developers – TCS iON

Completed practical training in deep learning concepts, neural network architectures, and AI model development techniques for intelligent systems.

- Introduction to Networking and Storage – IBM | Coursera

Learned networking fundamentals, storage systems, cloud infrastructure basics, and data communication concepts used in enterprise environments.

- Neural Networks and Deep Learning – DeepLearning.AI | Coursera

Completed Andrew Ng's Deep Learning course covering neural networks, forward/backpropagation, deep learning architectures, and AI model optimization.

- Structuring Machine Learning Projects – DeepLearning.AI | Coursera

Learned best practices for designing machine learning systems, error analysis, model evaluation, and production-level ML project structuring.
